

HILLMAN

Life is a hunt

HILLMAN

About Hillman

Hillman is ground-breaking, original and modern global brand, focused in manufacturing innovative, state of the art - hunting gear and apparel. Known for its advanced solutions in functionality, iconic design, refined elegance and style, Hillman hunting designs have been praised for its unsurpassed quality from millions of hunters worldwide.

Our brand is committed to constant innovation and dedication in pioneering revolutionary clothing pieces for hunters, made by hunters. We design with integrity, crafting our pieces with modern fabric technologies, multifunctional solutions and optimum capacity of performance.

Thinking forward, our entire team of professionals is steadily executing thorough research in latest trends and continues to invest long hours in rendering and developing new, cutting-edge technologies. With that being said, Hillman became the first brand in the world to implement memory foam technology and magnetic closing solutions in its hunting apparel. The unique Handsfree sling is a worldwide best seller, known to provide supreme comfort, while the Holsterpack hybrid is a one-of-a-kind combination of ergonomic backpack and gun case. Through engineering sound global innovations, we deliver a fresh new angle and raise functionality to a whole new level. We create new demands, and higher value standards for hunters that conventional hunting clothing and accessories are simply unable to deliver.

By devoting great ambition, passion and hard work, Hillman's mission is to build the best product, while exceeding expectations and using business to inspire and implement solutions. The Hillman's revolutionary Chairpack provides exceptional comfort while hunting, offering latest, most enhanced functionality solutions and design in hunting. Our latest invention is the advanced-belt-locking system, giving the advantage of fastening your pants, while eliminating any possible discomfort, when gaining or losing few pounds from your waistline. These designs are just a small part of the progressive ideas that Hillman brand devotes itself in offering to its clients.

Our greatest mission is hunter's complete satisfaction. We absolutely stand behind the unprecedented quality of our products and guarantee their excellent performance and superiority. Hillman's longstanding investments, strong values and work ethics gave us the opportunity to gain valuable and extensive experience in the field. We always listen closely and keep it real. We managed to prove ourselves as a strong, consistent and trustworthy competitor in this industry. Hillman exists to prove to each and every avid hunter its unmatched performance in terms of comfort, quality, functionality and advantages in technology and price.

Hillman exists to provide effortless solutions and support hunting worldwide, by making you a better and more efficient hunter, and to eagerly demonstrate our strong belief in our maxim:

A vertical photograph of a winter scene. The background is a soft-focus forest of trees covered in a thick layer of snow. In the foreground, there are several thin, dry, brown grass stalks and a small branch with a few brown, dried leaves. The overall color palette is muted, consisting of whites, greys, and earthy browns.

WINTER GIOTHING

HILLMAN

Created for active hunting the lightweight XPR Jacket provides excellent comfort and mobility. Because of its short construction, equipped only with the most essential functionality, the jacket is highly prized by the hunting experts. Fully waterproof and highly breathable, the XPR jacket will keep you warm and dry even in the most severe weather conditions.

AS MID-LAYER AS OUTERWEAR

A man with a beard and short hair is standing in a forest. He is wearing a quilted, camouflage-patterned jacket over a dark long-sleeved shirt and dark pants. He is looking to his left. The background is filled with trees and fallen leaves, suggesting an autumn setting. A tree trunk is visible on the right side of the frame.

BASE LAYERS & INSULATORS

HILLMAN

This is our "Where did you buy it?" product, which means that most of your hunting fellows are going to ask you this question. But please, don't tell them - it's a secret! Only you will know how warm you feel and how it fits you like you were born with it. This ultra-ergonomic and 100% breathable masterpiece provides warmth and comfort when used as a mid-layer for extreme winter cold, and suits you perfectly when used as outerwear in the autumn.

Merino Top

Style **508**

By using one of the best insulation materials on earth, combined with the most exceptional thermal control, Hillman created its base layer, which is made entirely out of ultra fine 18.5 µm Merino wool. It will be there when you need extra warmth and will also keep you cool in hot weather conditions. This 100% Merino layer has better properties than any other synthetic or wool/synthetic blend, that seems to save money, only to reduce the performance of the genuine Merino wool.

Merino Bottom

Style **509**

More than anything, it is important that your bottom underwear is made out of pure genuine Merino wool. Everyone knows well the discomfort of “sweaty legs” at midday, when using synthetic underwear, although the same underwear was OK in the morning. This is the dramatic difference between synthetic fiber and pure Merino. Only Merino fiber provides warmth in the morning and balances the exceeding heat at midday. Hillman guarantees that there is no better base layer material for hunting, than 100% Merino wool fiber!

The innovative Boxair technology used for Hillman underwear is the world's first technology, created to care and maintain man's health. By using cutting edge materials for cooling and bamboo fiber construction for distancing the testicles from the hot body, the smart boxers provide excellent conditions for men's fertility, no matter the activity or intensity of overheating. Developed for professional athletes, the Boxair technology delivers the utmost comfort and cares for the men's most precious cargo by providing optimal thermal control, like no other!

STRUCTURE

The specially designed cooling section of the underwear consists of two different tech fibers, which optimize air circulation and improve thermodynamics of the intimate zone. Nanocrystals treatment and cross-section structure of fibers create draining system that pulls moisture away from the skin to the outer layer of the fabric, therefore temperature in the contact area is reduced by up to -2° C compared to other materials .

Specific side membranes from carbonized bamboo tech fiber separate the testicles from the inner thighs, preventing overheating and stimulating the blood circulation.

Cooling section protects the testicles and inner thighs from contact, while intimate parts stay naturally relaxed and physically comfortable. Side panels are constructed to follow the anatomic curves of men's body and to delicately shape the intimate area without performing any pressure and tension. Side membrane mesh boosts air flow and due to innate body movements, even while resting, there is continuous air circulation in the section, providing coolness and moisture control.

The combination of two high-end tech fibers contributes to stop the increase of testicular temperature. Contact with cooling section of the underwear reduces the temperature in the intimate area by up to 2° C. Mineral content in tech fibers controls humidity, keeps testicles dry and eliminates body odors.

ICECOOL FIBERS

Icecool is trade mark tech fiber, consisting 100% of Boxair' cooling section front panel.

The fabric has fine, porous structure that favors airflow and fast drying.

The perfect moisture management of the fabric is due to the patented cross section of the fiber and its specific weaving process. The wicking channels within the fiber and between fiber yarns quickly expel moisture to textile surface, where it seamlessly evaporates.

BAMBOO CHARCOAL FIBERS

Bamboo charcoal tech fiber production follows patented technology.

Bamboo fibers have natural mineral content which determines their antiperspirant and antimicrobial features. Minerals enhance moist absorption, thus preventing bacteria growth and unpleasant odors.

BODY

The body of Boxair is made of high quality combed cotton. Combed cotton is extremely soft version of the traditional cotton, made by special treatment of the cotton fibers before being woven into yarn.

- A fabric with no analogue, hypoallergenic, prevents bacteria grow
- Quick drying material, biological antiperspirant. Effectively draws moisture away from skin to fabric's surface, reduces perspiration
- Contains natural minerals, prevents bacterial growth

- Selective permeability. Porous structure absorbs extra energy and optimizes thermoregulation in the intimate area
- UV protection: Reflects ultraviolet light.
- Freedom of movement and comfort of wearing

When talking about providing the necessary warmth during a cold weather hunting trip, there are many solutions but only Hillman's Heatmax3 system provides 20 000 mAh power for excellent heating solution, with the option to be used as a powerbank for your mobile phone and camera, as well as most USB chargers.

The latest carbon fiber heater technology is not only the most efficient and advanced on the market, but its radiated infrared heat has many benefits for your health, blood circulation and antibacterial protection.

The Heatmax3 System of Hillman is removable and easy to operate, which allows easy maintenance of your clothing when the system is removed.

The battery is delivered with set of different plugs, providing compatibility with most popular mobile phone brands and devices, so you can not only use it with our Heatmax Ready hunting clothing, but also as a powerbank in your every-day life.

Made of Cottoly® fabric, this t-shirt is one of the best underwear solutions offered by Hillman. The smart back pocket for installation of our optional Heatmax heating system quickly converts the t-shirt into a powerful body warming solution for extreme cold. The Heatmax ready long sleeve T-shirt is light enough to be used even in the summer or throughout the autumn months as outer clothing, with great moisture management, breathability and excellent comfort.

Available in colors: Available in sizes: **S - 4XL**

- Cottoly® breathable two-layered jersey

- Seamless shoulder panels

- Silvergear® anti-odor coating

- Half-polo Collar

Unlike the conventional non-breathable ponchos, our Dryhands Raincover is equipped with a genuine waterproof and breathable membrane preventing condensation and ensuring comfort at all times. The unique design keeps you and your gun dry even in a pelting rain, while the full length front zipper allows unimpeded shooting when the right moment arises. Multiple hood regulators will help you adjust your view, and when the sun comes out, the Raincover neatly folds in its own front pocket.

Available in colors: Available in sizes: **ONE**

Because of the love for our hobby and the intention of creating a hunting atmosphere at home, at the villa or at the hunting lodge, Hillman team developed 3D Towels as part of its Gamewear line.

Made with an innovative two-layer weaving technology, the towels have a 100% cotton side for excellent absorption and comfort and a micro fiber side for Ultra High Definition 3D printing.

The large sizes will bring an exciting hunting spirit at your living place or when traveling, while the small-sized towels with pre-installed swivels for belt loop attachment will be convenient to use when hunting or processing the game.

• CARABINER for belt loop attachment (for size 30x50 only)

• 100% Microfiber face side

• 100% Cotton back side

MEMBRANES

To be able to make your biggest dreams come true, we constantly research, test and create innovative items. Hillman's products are newly born ideas and new solutions, result of extensive experience and esteemed team work. We create unique, one of a kind pieces especially for you. Our goal is to give hunters all over the world highest level of comfort, by predicting their needs and make them realize that Hillman is all they need to enjoy their favorite sport. Here you will find only a part of the innovations that Hillman initiated and pioneered in the vast world of hunters. There are more hidden surprises that you will be happy to discover once you start wearing our collection.

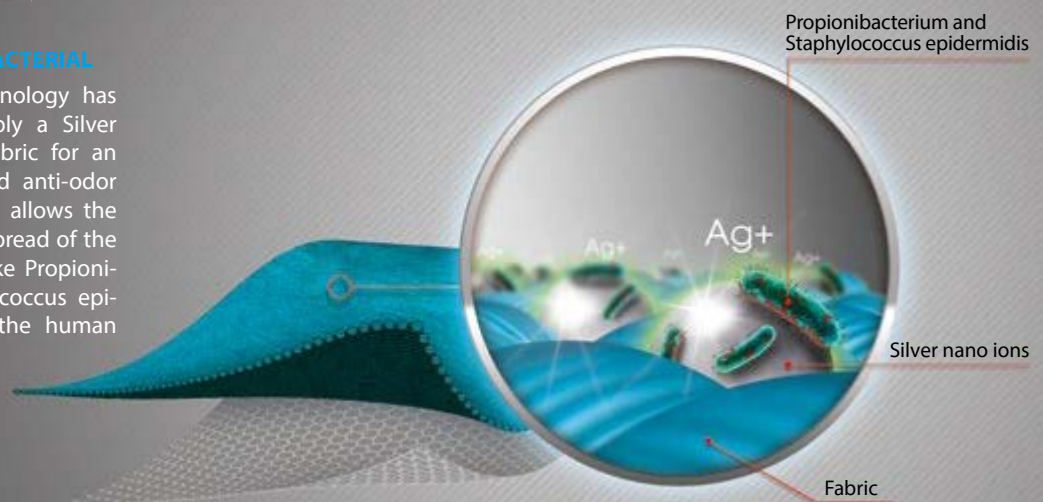

INSPIRA MEMBRANE TECHNOLOGY

Atmotec®INSPIRA is a vapour permeable and waterproof TPU (Thermoplastic polyurethane) film bonded with the outer fabric. Thanks to the INSPIRATM technology the Im is half the thickness of the conventional membranes and three times more elastic and resistant to high pressure. This feature puts Atmotec®INSPIRA amongst the world's three most effective membranes in this category.

ANTI ODOR & ANTI BACTERIAL

Sophisticated nano-technology has allowed Hillman to apply a Silver Nano coating to the fabric for an overall anti-bacterial and anti-odor effect. The coated fabric allows the silver ions to block the spread of the odor causing bacteria like Propionibacterium and Staphylococcus epidermidis, and prevent the human odor.

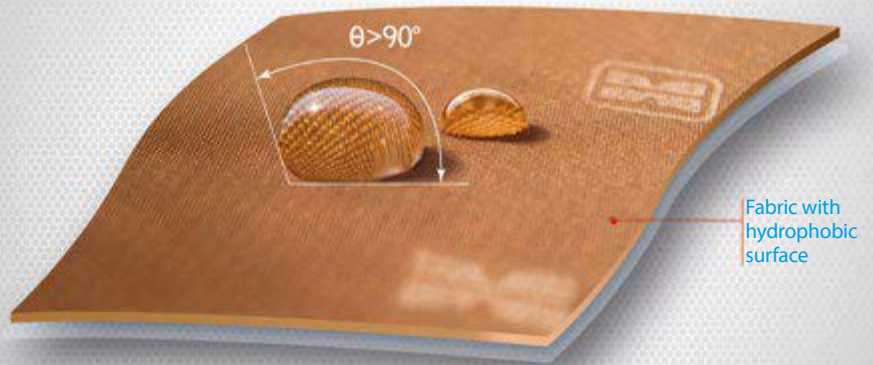

WATER AND DIRT REPELLENT

The double Durable Water Repellent is a high-performance protective coating added to fabrics to make them resistant to wetting and soiling. It creates a molecular lamination around the textile fibers that prevent the outer layer of the garment from becoming saturated with water, dirt or blood and makes it easier to clean and maintain. The DWR acts without changing the fabric original appearance, weight, touch or breathability and keeps wearer dry and comfortable when it rains as it doesn't allow the raindrops to soak in and make the apparel wet and heavy.

The 2xDWR coating creates a double thin hydrophobic surface, which prevent raindrops from soaking

DURAHEAT[®] HOLLOW FIBER INSULATION

DURAHEAT[®] insulation provides an excellent warmth-to-weight ratio. Even wet, it retains its insulation characteristics. Its hollow-core fibers hold more air than the conventional insulation materials and provides twice as much heat retention. The unique design of the fibers makes them approximately 22% lighter than comparable fibers. Its stretchable construction allows excellent freedom of movement making the DURAHEAT[®] insulation the optimal choice for active hunting even in extremely cold weather.

Ultra light weight

Greater heat retention

MEMORY foam was originally developed by NASA to decrease the very high pressure caused by the extreme G-force occurring during the take-off of the space shuttle. Taking benefit from the achievements of the advanced visco-elastic polymer engineering, the padding made of this high density supporting material takes the body contour and prevents any roughness like belts, hanging loops, seams or crimps from disturbing one's comfort.

Photocamouflage®

Photocamouflage® is the first hunting gear of its kind. In contrast to all camouflage patterns before, this one is created by simply applying true real-life images of natural landscapes, and not by painting them, where one can always see the difference. Photocamouflage® consists of real photo projection laid over a neutral background, aimed to create natural depth and perception of reality.

In order to accomplish a three-dimensional effect, for the first time Photocamouflage® used a technology with four levels of depth, as each level comprises of different type of greenery and gets obscure at 5, 10, 15 and 20 meters in depth. Thanks to this unique, four-level technology for obtaining 3D effect in combination with 100% real images, Photocamouflage® succeeded to create this masterpiece and changed entirely the course of camouflage history.

3D Xtreme [3DX]

In order to accomplish a three-dimensional effect, for the first time Photocamouflage® used a technology with four levels of depth, as each level comprises of different types of greenery and gets obscure at 5, 10, 15 and 20 meters in depth. Thanks to this unique, four-level technology for obtaining 3D effect in combination with 100% real images, Photocamouflage® succeeded to create this masterpiece and changed entirely the course of camo wear history.

Photocamouflage® 3DX is the ultimate disguise for hunters during wide variety of temperate zone environments. Designed with greatest attention to detail, Photocamouflage® 3DX incorporates oak and birch stems, limbs and leaves, pine scapes and branches with cones and needles that provide cover in various wooded settings, as well as the outdoors. Thanks to the unmatched Photocamouflage® photo technology this pattern is so vivid, it almost feels like you can reach out and touch the bark with your hand.

3D Xtreme Green [3DXG]

Based on the genuine Photocamouflage® 3DX, we created this detailed version adding green leaves and more depth of field. Photocamouflage® 3DXG has all the advantages of 3DX and it adds even more elements to the environment. It is ideal disguise for Temperate Boreal and Deciduous temperature zones and Chaparral. Because of the leafy predominance it is perfect disguise for tree stand hunters.

3D Xtreme [3DX]

This is our proposal for the waterfowlers. If you want to disappear in the wetlands there is nothing like Photocamouflage® WINGS 3D. Even if you hunt for species found close to fields, crops or open areas this is the perfect hideout for you. The color palette ranges from mellow brown to golden ochre that will make you vanish into marshes, overgrown riverbanks and grasslands. Created with the unparalleled Photocamouflage® technology, its deep shadows and sharp contrasts add unique perspective to the image, even from a bird's eye view, giving you the feel like the reeds and the cat's tails sway and rustle with the wind.

TUNDRA 3D [T3D]

Photocamouflage® TUNDRA 3D utilizes the benefits of the innovative Photocamouflage® photo technology to create the utmost cover up for winter hunting. The pattern is exceptionally illuminated and spread out, with white background, fractured by hazy gray-green and brownish earthly tones. The play of light and shadows is so vivid, you can see the snow-clad branches gently wagging in the air. Photocamouflage® TUNDRA 3D will cloak your maneuvers in secrecy in the hardwood or mixed forests, partially covered with snow bushes or rocks as well as in any snowy surroundings.

FIRE 3D [F3D]

Based on the genuine Photocamouflage® 3DX we created this amazing pattern that gives a fiery orange shelter while still keeping an excellent disguise. Photocamouflage® FIRE 3D is a mix of bright color and photo camouflage that is ideal for hunting in the woods. Taking advantage of the unique Photocamouflage® technology, it shows the position of the hunter to humans, hiding him from the color-blind eyes of the game at the same time. As distinguished from all its rivals Photocamouflage® FIRE 3D has a non-reflective background to prevent animals from spotting the reflection of UV light, and so reassures artful approach and best stalking positions.

HUNTERSHELL®

HUNTERSHELL® is an advanced super light woven micro suede textile with a matchless set of qualities. It is extremely breathable and quick-drying, providing excellent comfort and warmth when used outdoors. HUNTERSHELL® is especially suitable for hunting thanks to its heavy brushed surface and ensures optimal silence in hunting environments. It is widely preferred also because of its smooth and cozy touch.

The feel of touching genuine deer suede leather is unique and pleasant for everyone. This is the reason why the Deerskin® fabric is used for the making of Hillman apparel - the touching sensation is smooth and velvety, while its durability and wear resistance are comparable to those of genuine deer suede with identical thickness. The fabric's tear resistance caused by branches, bushes or thorns is guaranteed to a highest degree. It is lightweight and does not stretch or change its shape with time. The Deerskin® fabric will impress you with its unique feeling of luxury, functionality and comfort.

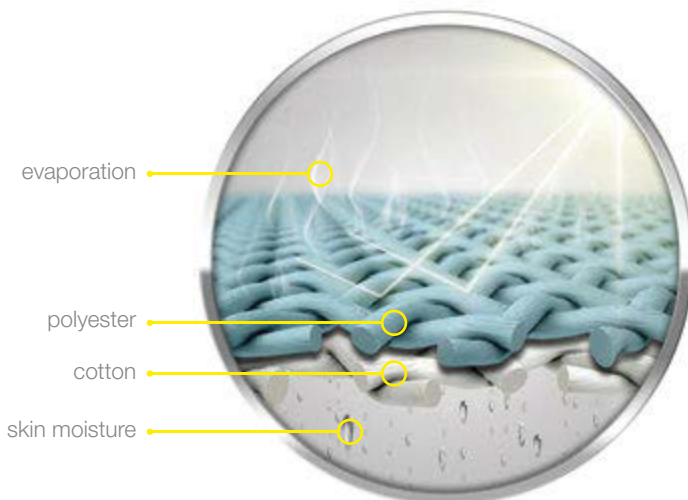

For insulation, Merino wool is one of the best fabrics on the planet - all natural material, with unbeatable properties for thermal regulation and insulation. Close to the skin, this magic material works as air conditioner. In small thermal amplitudes, it can chill the body when needed, as well as provide the necessary warmth when colder.

In comparison to polyester, nylon and cotton, Merino wool is a natural antibacterial material, and much more efficient at times, in terms of the thermal insulation properties that possesses. It's best used when 100% pure, and not blended with other synthetic fibers. When compared to synthetic fibers, Merino wool is times more expensive, but is also times more efficient for insulation, which makes it the most affordable and cost-effective insulation solution on Earth.

CottonSuede®

Cottonsuede® is an exclusive combination of cotton and polyester which assures lifetime usage with the highest level of comfort. The soft cotton inner layer absorbs the moisture from the skin and transfers it to the outer polyester layer where it quickly evaporates, creating the ultimate moisture management system. As a result, Cottonsuede® has a quiet and gentle deerskin feeling touch, while it's durable and extremely breathable at the same time.

Principle of work of COTTOLY® and Cottonsuede® fabric.

COTTOLY®

COTTOLY® is a soft and breathable two-layered material. The inner pure-cotton surface efficiently absorbs perspiration and transports it outward to the polyester exterior surface, where it rapidly evaporates. The T-shirts made of COTTOLY® are quiet and durable, and do a great job in keeping you dry and comfortable during the most active outdoor experience.

nanofleece

Developed on the grounds of the latest achievements of nanotechnology, NANOFLEECE® represents a new generation of polyester micro fleece fabrics. Its unparalleled construction of extremely fine fibers, traps more air than others of a similar type, while providing more warmth and pleasant comfort at the same time. NANOFLEECE® is demanded by the hunters for outer clothing as well as for base layering, for giving a soft and cozy body feeling and its silent nature. Its remarkable wind resistance makes NANOFLEECE® stand out from all the other wind blockers.

DURA-TEX®

When designing hunting accessories, fabric strength and durability are what matters most. Therefore, DURATEX® is an extremely abrasion, tear and strain resistant fabric, that provides maximum reliability. Thanks to its DWR-treated surface and the impregnation of rubber-coated waterproof polymer, DURATEX® guarantees maximum water protection in any product.

AIRFLO™

The 3D ventilated mesh AIRFLOTM is a netlike abrasion resistant material with unique construction that ensures air circulation in all directions. The vertical threads successfully eliminate concussion and vibrations in order to provide maximum satisfaction. As distinct from typical shock absorbers such as EVA foam panels, AIRFLOTM is exceptionally breathable and much lighter, while still delivers invaluable comfort and dry back all day long.

Materials & development

Our research and development team is constantly exploring new trends, levels of quality and new technologies in material construction, which bring the best performance for hunting gear and apparel. Some of our latest and highly functional fabrics, innovative accessories and soundest insulations are already implemented in the entire collection inviting you to enjoy highest level of performance, comfort and functionality.

As a rule of our company, we avoid the use of widely spread and commonly available materials, by developing our designs with different, much more functional and resilient alternatives, unlike our competitors.

We strongly believe in what we do, and we focus our efforts, time and skills to positively affect the lives of our clients. With respect and much knowledge of both the hunter's wardrobe and lifestyle needs, Hillman delivers different, exquisite and most advanced products, with unmatched class and functionality on the market.

SIZING CHARTS

Adults

tops sizes

C - Chest*

S	chest	94 cm		37-38 in
M	chest	100 cm		39-40 in
L	chest	106 cm		41-42 in
XL	chest	112 cm		43-45 in
2XL	chest	118 cm		46-47 in
3XL	chest	124 cm		48-49 in
4XL	chest	130 cm		50-52 in

*Top size could fit chest +/- 5 cm | +/- 2 in
